## HARDWARE SPECIFICATION

Thank you for your interest in the A-BET-A System. Please find listed below a hardware specification for our system.

You will require PC's with the minimum specification of Pentium 3 with PS2 configuration loaded with Windows 2000/XP. XP Pro would be preferable, although XP Home would be suitable for smaller networks

The manager or server PC will require one serial port for the raw data feed and one serial port for the UPS - if installed and min of 2 USB ports. In addition, an internal/external 56k modem will be required.  If a UPS is not used an external 56k modem will suffice.  Remote Access server must be installed and configured to work with the modem. Also it is recommended that Symantec PCAnywhere (Remote and Host) be installed on all machines.
If ADSL (Broadband) is available, AbetA would require a VPN connection for support purposes and strongly recommend that a firewall be installed and correctly configured.

You will need to have a backup facility on the Manager PC (or server if installed).

Virus Protection

We recommend that all machines have a virus checker installed such as Symantec Anti-Virus or McAfee's Virus Scan.

Networks

All machines need to be networked together using TCP/IP.

Machine names:  Server (if installed) Manager:  Betty_1:  Betty_2:  Betty_3:
All C drives should be shared as DRVC
From all machines map the F drive as \\manager\drvc OR  \\server\drvc as appropriate

SIS Bet Settling Feed

Contact can be made directly to SIS regarding the installation of the Datalink cable, alternatively we would be happy to discuss your requirements.

Commidea EFT Authorisation

You will require a dedicated PC for the Commidea software, operating system:
Windows NT, on the network to be named EFT-server.  The system uses a Paknet Radio pad for authorisations (Vodata: Susan Boxall 01635 502551) connected to COM2 and an external modem to be connected to COM1 for polling.

Customers situated in the Republic of Ireland must contact their bank regarding hardware specification for banking terminals.  (We interface with either AIB Flexicom or Bank Of Ireland Payware software).

Printers

We recommend HP LaserJet single tray printers, (5 si printer drivers will also need to be installed) if however you decide to use your own Company Headed paper for your statements at least two trays will be required.
